

MUSTAFA SHAABAN
SOFTWARE ENGINEERING LEAD

Services Agreement

Mizzey Operations Platform. The terms on which the platform is built, paid for, accepted, owned and supported, between Mizzey and Mustafa Shaaban.

Not legal advice, and not reviewed by a lawyer. Both parties are encouraged to take their own advice before signing.

5 September 2026

STATUS

■ For signature

PREPARED BY

Mustafa Shaaban

ANNEX A

Feature Register & Scope Definition, MS-ANX-2026-001

1. The parties

This Agreement is made on the date of the last signature below, between:

	THE DEVELOPER	THE CLIENT
Name	Mustafa Mohamed Shaaban	
Capacity	Individual professional	
Trading as	Mizzey.com project engagement	Mizzey
Address		
Identification		
Email		
Telephone		

Each is a **Party**, and together they are the **Parties**.

NOTE

Read this before signing

This Agreement is written to be read and understood rather than to be impressive. It records what was proposed and agreed, in plain language.

It is not legal advice, and it has not been reviewed by a lawyer. Both Parties are free, and encouraged, to take their own advice before signing. Nothing here prevents that, and neither Party should sign a document they do not understand.

2. What this Agreement covers

The Client wishes to have an independent e-commerce platform built for the Mizzey business. The Developer has proposed three packages, and the Client has selected the **Mizzey Operations Platform**.

This Agreement sets out the terms on which that platform is built, paid for, accepted, owned and supported.

2.1 The documents that make up this Agreement

This Agreement consists of the terms below together with the annexes listed in section 22. All of them apply together.

If they conflict, they are read in this order of priority:

1. This Agreement
2. Annex A, the Feature Register, for anything about **scope**
3. Annex B, the Statement of Work, for anything about **money or dates**
4. The remaining annexes

Nothing said in conversation, in a meeting, in a message or in an earlier draft forms part of this Agreement unless it appears in one of these documents or in an agreed Change Request.

3. Definitions

TERM	MEANING
The Platform	The Mizzey Operations Platform, being everything classified P1, P1-L or DLV in Annex A
The Fee	310,000 EGP, as set out in section 5
Stage	One of the six delivery stages in Annex B
Production Go-Live	The moment the Platform is live on the production environment and available to real customers
Warranty Period	60 calendar days from Production Go-Live
The Interface Design	The user interface and user experience design of the storefront and the operations screens, produced by the Developer under Annex B section 9
Mizzey-Specific Work	Source code, configuration, theme, templates, database schema, migrations, documentation and project assets created specifically for the Client under this Agreement
Corex	The reusable framework and application layer owned by the Developer, described in section 9.3
Change Request	A written record of a change to scope, fee or timeline, agreed under Annex D
Working Day	Sunday to Thursday, excluding official public holidays in Egypt

4. Scope of the services

4.1 What the Developer will do

The Developer will design, build, test, deploy and hand over the Platform, and will produce the written deliverables listed in Annex A as DLV rows.

The Developer will also produce the Interface Design, to the requirements in the Design Brief and Request for Proposal, MS-RFP-2026-003. The Client has confirmed that the Developer provides it. **Brand identity is not part of the Interface Design and is not included**, as Annex B section 9.1 sets out.

4.2 Scope is defined by Annex A, and only by Annex A

Only rows marked P1, P1-L or DLV in Annex A create a delivery obligation. Rows marked P2, P3 or OUT are recorded for completeness and create no obligation, no price, no date and no warranty.

This is the rule that prevents a disagreement about scope from becoming a disagreement about memory. If something is expected, it should be found in Annex A before signature, and if it is not there it can be added there before signature.

4.3 Second release items

Some items are contracted but delivered shortly after Production Go-Live. These are marked **S2** in Annex A. They are included in the Fee and are not a separate purchase. Launch is not the end of this Agreement.

4.4 Standard of work

The Developer will perform the services with reasonable skill and care, in accordance with current professional engineering practice.

5. The Fee and payment

5.1 The Fee

The Fee is **310,000 EGP**, made up of **290,000 EGP** for the Platform and **20,000 EGP** for the Interface Design.

No value added tax and no other tax is added to the Fee, and no tax is deducted from it. If either Party is informed by a competent authority that a tax applies to this engagement, the Parties will agree in writing how it is handled before any further payment is made.

The Fee is quoted and payable in Egyptian pounds.

5.2 Payment schedule

The Fee is paid in six instalments, each tied to a Stage:

STAGE	WEEK	%	AMOUNT
1. Start and specification	2	20	58,000 EGP
2. Foundation and products	5	20	58,000 EGP
3. Shop front complete	8	20	58,000 EGP
4. Operations system	11	15	43,500 EGP
5. Migration and reports	13	15	43,500 EGP
6. Live and handed over	14	10	29,000 EGP
Platform subtotal		100	290,000 EGP

The Interface Design is paid once, outside the Stage schedule:

ITEM	WHEN	AMOUNT
Interface Design	On written approval of the design by the Client, expected week 4	20,000 EGP
Total		310,000 EGP

Stage 1 is invoiced on signature. Each later instalment is invoiced when its Stage is accepted under section 8. The Interface Design is invoiced when the Client approves the design.

5.3 Payment terms

Invoices are payable within **7 Working Days** of issue, in Egyptian pounds, by bank transfer or an agreed local transfer method. Each Party bears the charges levied by its own bank.

5.4 Costs paid by the Client directly

Hosting, backups, licences, plugins, the domain, payment processing fees and courier charges are contracted and paid by the Client, in the name of the Client, so that the Client owns every account. They are itemised as estimates in Annex B. The Developer will not commit the Client to any third-party cost without prior approval.

6. Timeline and dependency

6.1 Estimated duration

The estimated duration to Production Go-Live is **14 to 16 weeks**.

6.2 When the clock starts

Time begins when the inputs listed in Annex F are available, not on the date of signature. In particular, an approved brand identity is required before implementation begins, and an approved payment merchant account is required before the Platform can take payment.

6.3 Delay

Where the Client is late in providing an input, an approval or a third-party account, the timeline extends by the period of the delay, and the Developer is not in breach of this Agreement for that period.

Where the Developer is late for reasons within the control of the Developer, the Developer will notify the Client in writing with a revised date as soon as the delay is known.

6.4 Review and approval

The Client will respond to anything submitted for review within **5 Working Days**. If no written response is received in that period, the item is treated as approved.

The Client may ask for more time before the period expires, and the Developer will not unreasonably refuse.

7. Changes to scope

Neither Party may change the scope, the Fee or the timeline on its own.

A change takes effect only when it is recorded as a Change Request and agreed in writing by both Parties, following the procedure in Annex D. A Change Request states what changes, what it costs, and what it does to the timeline, before any work on it begins.

No work outside Annex A is performed, charged for, or expected, without an agreed Change Request. This protects both Parties equally.

8. Acceptance

8.1 How work is accepted

Work is accepted Stage by Stage during the build, and then as a whole through user acceptance testing before Production Go-Live, following Annex C.

8.2 The standard

A deliverable is accepted when it meets the definition of done and the acceptance criteria recorded in Annex A and reproduced in Annex C.

8.3 Rejection

If the Client believes a deliverable does not meet those criteria, the Client will say so in writing within the review period, identifying the specific criterion not met. The Developer will correct it and resubmit, at no additional charge, where the criterion is genuinely unmet.

A request for something that is not in Annex A is not a rejection. It is a Change Request.

8.4 Acceptance by silence

If no written response is received within **5 Working Days** of submission, the deliverable is treated as accepted and its instalment falls due.

9. Intellectual property and ownership

This section decides who owns what. It matters more than any other section in this Agreement, so it is written precisely.

9.1 Mizzey-Specific Work belongs to the Client

On payment of the Fee in full, all Mizzey-Specific Work belongs to the Client. This includes the source code, configuration, theme and templates, database schema and migrations, documentation and project assets created specifically for the Client.

The Mizzey-Specific Work is delivered throughout the project to **a repository owned by the Client**, with its development history, not handed over as a single archive at the end.

9.2 Open source and third-party components

WordPress, WooCommerce, and any third-party plugins, libraries or components used in the Platform remain subject to their own licences. The Client does not acquire ownership of them, and neither does the Developer. This is normal and applies to every project built on open source.

9.3 Corex

Corex is the reusable framework and application layer of the Developer, built over several projects and used here to avoid rebuilding foundations from nothing. **Corex remains the property of the Developer.**

On payment of the Fee in full, the Developer grants the Client a licence to use Corex as incorporated in the Platform. That licence is:

- **perpetual**, it does not expire
- **irrevocable**, it cannot be withdrawn, including if this Agreement ends or the Parties fall out
- **royalty-free**, there is nothing further to pay for it, ever
- **non-exclusive**, the Developer continues to use Corex on other projects

- **worldwide**, and not limited to Egypt
- extending to the right to **use, host, run, modify and have modified** Corex as part of the Platform
- extending to **any other developer or agency the Client engages**, who may operate, maintain and extend the Platform, including the Corex layer within it, on behalf of the Client

The one thing the licence does not permit is extracting Corex from the Platform and selling, licensing or distributing it as a standalone product to a third party.

The practical effect, stated plainly: **the Client is not locked in**. The Client can take the Platform to any other qualified development team at any time, and that team can run and extend all of it. What the Client cannot do is resell the framework itself as a product, which is not something the Client has any reason to do.

9.4 What the Client owns from the start

The Mizzey brand, name, logo, content, product data, images, customer data and business information belong to the Client at all times, and nothing in this Agreement changes that.

9.5 Before full payment

Until the Fee is paid in full, the licences and transfers in this section have not taken effect. Work delivered to the repository of the Client before then is delivered for review and testing.

9.6 Portfolio

The Developer may describe this project and show images of the delivered interface in a professional portfolio, with the prior written approval of the Client, which will not be unreasonably refused. No commercial figures, customer data or confidential information may be shown.

10. Warranty

10.1 What is warranted

The Developer warrants the Platform for **60 calendar days from Production Go-Live**.

During the Warranty Period the Developer will correct, at no charge, reproducible defects where the delivered implementation does not conform to the scope in Annex A and the acceptance criteria in Annex C.

10.2 What the warranty is not

The warranty is not a service level agreement. It carries no guaranteed response time, no uptime commitment and no availability guarantee.

It does not cover:

- faults in third-party services, including hosting, the payment provider, the courier and any third-party plugin
- changes made to the Platform by the Client or anyone else after handover
- new requirements, new features and changes of mind, which are Change Requests
- content, data or configuration errors introduced by the Client
- problems caused by the Client not following the documented operating procedures

10.3 After the Warranty Period

Support after the Warranty Period is optional, on the terms in Annex E. There is no mandatory retainer, no minimum term, and no requirement to buy support from the Developer.

11. Confidentiality

Each Party will keep confidential the non-public information it receives from the other, including commercial terms, pricing, business plans, customer data, source code and credentials, and will use it only for the purpose of this Agreement.

This obligation continues for **three years** after this Agreement ends. It does not apply to information that is public through no fault of the receiving Party, was already lawfully known, or must be disclosed by law.

Each Party will protect the credentials and access it holds for the other, and will return or destroy them on request when they are no longer needed.

12. What the Client confirms

The Client confirms, and the Developer relies on this:

- The Client holds the rights, or the necessary permissions, to all content, product descriptions, images, trademarks and material it provides or asks to have migrated to the Platform.
- This includes **product images and descriptions moved from marketplace listings**. Some of that material may have been created by brand owners or by the marketplace. Moving it to an independent store is a different use, and the Developer cannot verify those rights on behalf of the Client. Written confirmation is required before migration begins.
- The Client is responsible for the accuracy of its product, pricing, stock and policy information.
- The Client is responsible for its own legal and regulatory obligations, including consumer protection, invoicing, and the wording of its terms, privacy, shipping and returns policies. The Developer implements the policies, and does not draft them.

The Client will hold the Developer harmless against third-party claims arising from material the Client provided and the rights to which the Client confirmed.

13. Data and access

The Platform processes customer personal data. The Client is the party responsible for that data.

The Developer will access it only as needed to build, test, correct and support the Platform, will not use it for any other purpose, and will not disclose it.

The Platform is built with the security controls recorded in Annex A and current engineering practice, including secure password storage, role-based access control, input validation, rate limiting, secret management, tokenised payment integration, backups and logging. **No internet-connected system can be guaranteed immune from all future vulnerabilities**, and no such guarantee is given here.

Hosting location is chosen by the Client, on the advice of the Client.

14. Performance

Performance work includes image optimisation, lazy loading, caching, content delivery network configuration and frontend optimisation.

Measured performance in production depends on catalogue size, content quality, third-party scripts, hosting capacity and real traffic. **No specific performance score and no fixed page load time is promised.**

15. Limitation of liability

Neither Party excludes liability for fraud, or for anything that cannot lawfully be excluded.

Subject to that:

- Neither Party is liable to the other for loss of profit, loss of revenue, loss of business, loss of anticipated savings, or indirect or consequential loss.
- The total liability of the Developer under this Agreement, for any and all claims, is limited to **the total amount actually paid by the Client to the Developer under this Agreement.**
- The Developer is not liable for the acts, failures, outages, price changes or withdrawal of third-party services, including hosting, the payment provider, the courier, and any third-party plugin or platform.

16. Suspension

If an invoice is unpaid for more than **14 Working Days**, the Developer may suspend work after giving written notice. The timeline extends by the period of suspension, and work resumes when the invoice is paid.

Suspension is not termination, and does not affect the accrued rights of either Party.

17. Termination

17.1 By either Party for breach

Either Party may end this Agreement in writing if the other is in material breach and has not corrected it within **15 Working Days** of written notice describing the breach.

17.2 By the Client for convenience

The Client may end this Agreement at any time on **10 Working Days** written notice.

17.3 What happens on termination

- The Client pays for every Stage accepted, and a fair proportion of the Stage in progress, based on the work actually performed.
- The Developer delivers the Mizzey-Specific Work completed to that point to the repository of the Client, together with the credentials, documentation and access needed to continue.
- On payment of the amounts due, the ownership and licence terms in section 9 apply to everything delivered, **including the Corex licence for what has been delivered**. The Client is never left holding code it cannot lawfully run.
- Confidentiality, intellectual property, limitation of liability and governing law survive termination.

18. Force majeure

Neither Party is in breach for a delay caused by something genuinely outside its control, including a natural event, a general failure of internet or power infrastructure, a governmental act, or a general banking or payment system failure.

The affected Party will notify the other promptly, and the timeline extends by the period affected. If the event continues for more than **60 days**, either Party may end this Agreement under section 17.3.

19. Independent professional

The Developer is an independent professional, not an employee, partner or agent of the Client. Nothing in this Agreement creates an employment relationship, a partnership or a joint venture.

The Developer decides how the work is performed, and is responsible for the tools and equipment used to perform it.

20. Notices

Notices under this Agreement are given in writing, by email to the addresses in section 1, and are treated as received on the next Working Day after they are sent.

Either Party may change its address by notifying the other.

Routine project communication does not need to follow this section. It applies to notices about breach, suspension, termination and Change Requests.

21. General

- **Entire agreement.** This Agreement and its annexes are the whole agreement between the Parties about the Platform, and replace every earlier proposal, quotation, discussion and draft.
- **Variation.** A change to this Agreement is valid only in writing, agreed by both Parties.
- **No waiver.** If a Party does not enforce a right, that does not waive it.
- **Severability.** If any provision is found unenforceable, the rest continues in force.
- **Assignment.** Neither Party may transfer this Agreement to a third party without the written consent of the other, which will not be unreasonably refused.
- **Subcontracting.** The Developer may use a subcontractor for part of the work, remains fully responsible for it, and remains the single point of contact for the Client.
- **Counterparts.** This Agreement may be signed in counterparts, and an electronic or scanned signature is as valid as an original.

22. Governing law and disputes

This Agreement is governed by the laws of the **Arab Republic of Egypt**.

If a dispute arises, the Parties will first attempt to resolve it directly, in good faith, within **20 Working Days** of one Party notifying the other in writing.

If it is not resolved that way, the courts of Egypt have jurisdiction.

23. The annexes

ANNEX	DOCUMENT	ID
A	Feature Register & Scope Definition. The definitive scope	MS-ANX-2026-001
B	Statement of Work and Commercial Terms	MS-SOW-2026-009
C	Acceptance and UAT Plan	MS-UAT-2026-013
D	Change Control Procedure	MS-CHG-2026-014
E	Support and Maintenance Terms	MS-SUP-2026-015
F	What You Need to Provide	MS-DEP-2026-012

Read alongside these, but not forming part of this Agreement: What We Are Building, MS-DOC-2026-002, which explains the scope in plain language, the Design Brief and Request for Proposal, MS-RFP-2026-003, and the Project Plan and Delivery Schedule, MS-PLN-2026-011.

24. Signature

Each Party confirms that it has read this Agreement and its annexes, including Annex A which defines the scope and records what is not included, and agrees to be bound by them.

THE CLIENT, MIZZEY	THE DEVELOPER
Name	Mustafa Mohamed Shaaban
Title	Software Engineering Lead
Signature	
Date	

Each Party keeps one signed copy.

Prepared by Mustafa Shaaban. Not legal advice. Both Parties are encouraged to take their own advice before signing.
