What You Need to Provide

Mizzey Operations Platform. Every account, approval, decision and piece of content needed from Mizzey, when each is needed, and what stops if it is late.

Annex F to the Services Agreement, MS-AGR-2026-010. The delivery timeline begins when the items marked as blocking here are available.

COMPANION DOCUMENT

Project Plan and Delivery Schedule, MS-PLN-2026-011

1. Why this document exists

The store cannot be finished without the items in this document. Every one of them is something only you can supply.

This is not a formality. On projects of this size, the schedule is almost never lost to development speed. It is lost to waiting: for an account approval, for a design, for the Arabic version of the product descriptions. **The timeline in your Statement of Work begins when the items marked as blocking here are available, not on the day the contract is signed.**

The document is written as a working checklist. Print it, put a name and a date against each row, and it becomes the thing you run your side of the project from.

NOTE

The two that catch everyone

The payment merchant account. It takes longer to approve than anything else on this list, and nothing about it can be accelerated from this side. Start it first, today if possible, before any other item here.

The Arabic content. A bilingual store needs two versions of everything a customer reads. The multilingual system, the language switcher and the right to left layouts are built for you. **The words are yours to supply, in English and in Arabic.** Plan the translation alongside the build, not at the end of it.

2. Accounts and access

Every account is opened in the name of Mizzey, so that Mizzey owns it. The developer is given access to work with it, and that access is handed back at the end.

WHAT	DETAIL	NEEDED BY	IF IT IS LATE
Payment merchant account, approved	Commercial registration and tax card. Paymob if you approve the recommendation, otherwise the provider you choose	Start first, before anything else	The store cannot take payment
Carrier account, API key and rate card	Your rate card by governorate, once a carrier is approved	Before stage 4	Checkout cannot be completed
Hosting instruction	Written instruction on hosting location, taken on your own advice	Before stage 2	Servers cannot be prepared
Domain	Registered in the name of Mizzey	Before stage 6	Launch is blocked
Code repository	Owned by Mizzey. Created for you if you prefer	Before stage 2	Code cannot be delivered to you as it is written
Analytics and advertising accounts	Google, Meta, TikTok, as applicable to your launch decision	Before stage 5	Tracking cannot be verified
Business email domain	For customer notifications to send reliably	Before stage 5	Emails are more likely to reach spam folders

OWNER ON YOUR SIDE	TARGET DATE
--------------------	-------------

3. Brand and design

WHAT	DETAIL	NEEDED BY	IF IT IS LATE
Approved brand identity	Name, logo, colours, typography, and the rules for using them	Before stage 2	All implementation stops
Approval of the interface design	Produced by the developer, presented to you in week 4. You approve it	Before stage 3	The storefront cannot be built

An approved brand identity is required before implementation begins. It is what the interface is designed from.

The interface design is being produced by the developer, at 20,000 EGP, as confirmed. So there is nothing for you to source there, and nothing for you to do except review and approve it in week 4. Full terms are in section 9 of MS-SOW-2026-009.

Brand identity is a separate thing and is not included in that 20,000 EGP. It is the logo, colours, typography and the rules for using them, and the interface is designed from it. If Mizzey does not already have one, raise it before signature so it can be quoted rather than assumed.

--------------------	-------------

4. Catalogue and content

WHAT	DETAIL	NEEDED BY	IF IT IS LATE
Amazon sample export file	A real export, not a mock-up. Used to design the migration tool	Before stage 2	The import tool cannot be finalised
Written confirmation of image rights	That you hold the rights to your product images and descriptions	Before stage 5	Images will not be migrated
Full catalogue export	The complete product data set	Before stage 5	Products cannot be loaded
Product photography	Where marketplace images are not being reused	During stage 3	Products cannot be loaded
All storefront content, both languages	Products, categories and pages, in English and Arabic. English first	During stage 3	The store cannot launch multilingual
Legal text	Shipping, returns, privacy and terms wording	Before stage 6	Launch is blocked
Category and brand structure	How you want your catalogue organised	Before stage 2	The product model cannot be finalised

4.1 Image rights, in more detail

You sell products from other brands. Some of the images and descriptions on your marketplace listings were created by those brands, or by the marketplace itself. Moving them to your own store is a different use of that material.

Written confirmation that you hold the rights is required, because it cannot be verified for you. If the rights are not clear for part of the catalogue, it is far better to know that in stage 2 than to discover it the week before launch, when the only options left are bad ones.

4.2 Legal text, in more detail

The policies are implemented, not drafted. The system enforces the return window you set, displays the shipping terms you write, and captures the consent your privacy policy describes. The wording of those policies is yours, and should be right for your business and your obligations.

OWNER ON YOUR SIDE	TARGET DATE
--------------------	-------------

5. Business decisions

These are business decisions, not technical ones, and they will not be guessed on your behalf. Each one changes what gets built.

DECISION	NEEDED BY	YOUR ANSWER
Payment provider approved , Paymob or another	Immediately	
Carrier approved , Bosta or another	Before stage 4	
Notification channel at launch . Email is recommended, with WhatsApp and SMS following later as separate work	Before stage 4	
Cash on delivery: offered or not, any order value limit, any fee	Before stage 4	
Which payment methods at launch: cards only, or cards and wallets	Before stage 4	
Return window: how many days, and any product types excluded	Before stage 4	
Welcome discount: value, maximum, expiry, who qualifies	Before stage 4	
Free shipping: does two items mean two units or two different products, and any exclusions	Before stage 4	
Whether a welcome discount, a coupon and free shipping can all apply to one order	Before stage 4	
Which advertising platforms at launch: Meta only, or Meta with TikTok and Google Shopping	Before stage 5	
VAT and invoicing requirements for your company	Before stage 5	
Your authenticity and warranty policy wording	Before stage 6	
Hosting location, after taking your own legal advice	Before stage 2	

6. People and time

WHAT	DETAIL	NEEDED BY
A named decision maker	One person who can approve on your behalf, so approvals do not circulate	At kickoff
A named reviewer	The person who actually looks at each stage on staging	At kickoff
Feedback within 5 working days	On anything submitted for review	Every stage
Availability for acceptance testing	Your team runs the acceptance script, with support	Stage 6
Availability for the training session	The handover session, plus the written Arabic manual	Stage 6

Feedback within 5 working days is a contractual term, not a request. If nothing is received in that period, the item is treated as approved and the project continues. If you need longer, ask before the period ends and you will be given it. The rule exists so the project cannot stall in silence, not to rush your review.

7. What you get in return

So that this reads as an exchange rather than a list of demands, here is the other side of it.

- A staging environment available to you throughout, not only at review points
- A weekly written note: what was completed, what is next, what is waiting on you
- A working demonstration at every stage, not a document describing one
- The technical design, site structure and user flows, and the interface designs, all approved by you before anything is built
- Every requirement written down with a reference number, so scope is never a matter of memory
- All Mizzey-specific code delivered to a repository you own, as it is written
- Full documentation, an Arabic administrator manual, training and a technical handover
- 60 calendar days of warranty from go-live

8. Kickoff checklist

The items that must be settled in the first week.

ITEM		DONE
1	Services Agreement and Statement of Work signed	
2	Named decision maker and named reviewer confirmed	
3	Payment merchant account application submitted	
4	Decision made on who provides the interface design	
5	Brand identity status confirmed, with a date if not yet approved	
6	Hosting location instruction given in writing	
7	Code repository created in the name of Mizzey, access granted	
8	Amazon sample export file supplied	
9	Communication channel and weekly note day agreed	
10	Target start date for stage 1 confirmed	

Anything on this list that looks difficult is worth raising now. Every one of them has a workaround if it is known about early, and almost none of them do if they are discovered late.
